

Milliken®
Hyperform® HPN® 909ei
 Cleaner chemistry for thermoforming applications

CASE STUDY

This Milliken performance additive for polypropylene helps thermoformers produce sparkling clear, clean yoghurt cups

Derived from a clean chemistry, Milliken’s Hyperform® HPN® 909ei performance additive is used to modify homopolymer polypropylene (HPP) that can be thermoformed into clear food packaging such as yoghurt cups. The resulting material is well suited for these types of food-contact applications, as it has one SML (Specific Migration Limit) less than the previous-generation product, which is critical when it comes to European Union regulations.

Additionally, products made from resin optimized with Hyperform HPN 909ei feature excellent aesthetics, including reduced haze, less yellowing, and an overall cleaner look. This enables end users to replace other resins in various applications with highly recyclable polypropylene.

PP modified with Hyperform HPN 909ei offers an excellent balance of physical properties, and helps to resolve many of the production issues, including shrinkage and warpage, that occur when thermoformers use traditional nucleators. No longer do converters need to sacrifice impact strength in order to gain greater stiffness (flexural modulus).

Hyperform HPN 909ei provides isotropic shrinkage (similar shrinkage in both directions, which reduces warpage), and a higher heat-deflection temperature (HDT) that offers the improved heat resistance vital for hot-fill and microwaveable applications.

When comparing HPP modified with Hyperform HPN 909ei (at 400 ppm) with HPP standard resin, the benefits of using this performance additive become clear:

		HPP Standard	HPP with HPN 909ei @ 400ppm
	MFR (g/10 min)	2.7-3.0	2.7-3.0
	Portion Cup Haze (%)	80.8	10.7
	Crystallization behavior Tc (°C)	113	123
ISO	Chord Modulus (MPa)	1254	1510
	Notched Charpy impact @ 23°C (KJ/m²)	3.56	4.46
ASTM	1% secant Modulus (MPa)	1272	1515
	Notched Charpy impact @ 23°C (J/m)	32	47

STIFFNESS INCREASE

HAZE REDUCTION
