

Milliken Turf Products

Blazon® Spray Pattern Indicator is a non-staining blue, green, or red liquid colorant designed to be used with pesticide, fertilizer and/or plant growth regulator tank mixes. Blazon provides visual assurance that these solutions are uniformly applied, with minimum overlap and no missed areas. Blazon helps to alert the operator to improper equipment operation - the color immediately indicates line and/or connection leak and clogged nozzles. Blazon is an excellent safety tool - the color allows the operator to quickly detect exposure to the spray solution.

Blazon® Spray Pattern Indicator

Unique Features

- **Colorant** - Blazon® is water soluble polymeric colorant, not a dye - it is non-staining to skin, clothing and equipment.
- **Inert** - Pesticides are active at very low rates, and even a small amount of interference from a dye could affect the entire application. Blazon is an inert product at all pH's and has been university tested to prove compatibility.
- **No heavy metals** - Blazon's unique manufacturing process does not require the use of heavy metals. None are used so there are none in the final product.
- **Highly visible** - The product is designed to be discreet but highly visible to the trained eye. Even on thick foliage or bare ground, the evidence of chemical application is provided by the bright colorant.

Application Rates

PRODUCT	EQUIPMENT	APPLICATION	RATE
